BERGGREN ARCHITECTS

First Congregational Church, Ashland, NE

Sanctuary, Augmented lighting & Sound

PRESERVING OUR ARCHITECTURAL HERITAGE for 30 YEARS

The First Congregational Church retained Berggren Architects to create a Master Plan that included an addition for their church. We initially completed a Historic Structures Report, spelling out what was necessary to restore and maintain their church, built in 1908. The Historic Structures Report led to the development of a Master plan. The goal of the completed Master plan was to guide the congregation with a list of priorities and estimates to rejuvenate their church with new amenities, such as an accessible entrance, accessible restrooms, a more welcoming Fellowship Hall, as well as studying the sanctuary for better placement of the choir, instrumentation, and video services. It also incorporates an updated kitchen, better lighting throughout the building, and address more convenient storage

New Sound Console

New Projection Screen & Lighting

After completion of the master plan, the congregation voted to proceed with the top priorities, which were to add an accessible restroom to the first floor of the church, augment the lighting and sound reinforcement in the sanctuary, as well as adding a remote control screen and projector system for multi-media presentations.
